PIONEERING SOLUTIONS

Market-Ready Innovation

Rhinotrusion is redefining how modern window and door systems are built. We supply advanced composite profiles engineered for superior strength, thermal efficiency, and design flexibility—helping manufacturers meet modern architectural and performance demands. Our platform delivers:

- High-performance composite material science
- Scalable, production-ready system profiles
- Future-proof designs aligned with evolving codes

For manufacturers, joining the RHINOCRASH Network provides a clear competitive edge—expanded product capability, stronger differentiation, and new revenue potential.

Dear Window & Door Fabricator,

Thank you for your interest in Rhinotrusion LLC. We are pleased to share an overview of our advanced composite–aluminum systems, including the RT7550, RT9050, and RT7650 platforms, each engineered to support manufacturers seeking reliable, high-performance solutions for modern fenestration products.

Within this information pack, you will find system details and component overviews covering the materials required to produce:

- **Bi-Folding Doors**
- **Entrance Doors**
- **Multi-Sliding Doors**
- **Windows**

Our systems are designed to provide fabricators with consistent assembly principles, strong structural performance, and improved thermal efficiency across all product types. Whether a manufacturer is looking to expand their current offering or evaluate new product platforms, the RT7550, RT9050, and RT7650 provide flexible solutions adaptable to a wide range of market requirements.

Rhinotrusion supports partners with system documentation, technical guidance, and ongoing product development as part of our growing RHINOCRASH Network, aimed at strengthening collaboration and market presence across North America and Europe.

We would be happy to discuss any of the systems in more detail, answer technical questions, or explore how these platforms may align with your current or future manufacturing capabilities.

Thank you for taking the time to review this material. We look forward to the possibility of speaking with you further.

Yours sincerely,

Dave Shearman
Partner / Sales / Operations

Advanced Systems for Manufacturers Who Lead

PERFECT MATCH

Your customers expect options—and your manufacturing capabilities should empower you to deliver them. With our diverse range of profiles and bespoke profile design service, you can offer a precise match for any architectural vision your market demands.

Whether a project calls for classic aesthetics, modern minimalist lines, or a custom look tailored to a specific client, our systems give you the flexibility to manufacture products that fit every design requirement—without adding complexity to your production workflow.

INNOVATIVE DESIGN

WHERE INNOVATION MEETS
UNBEATABLE FLEXIBILITY

Constructing custom doors and windows for your clients has never been more effortless, thanks to Rhinotrusion's diverse and flexible profiles.

Where ease of manufacturing meets a vast array of material choices, ensuring that every design vision is met with precision.

Our profiles are tailored to provide a seamless integration of aesthetics and functionality, allowing you to easily pivot between different client requirements.

Whether you envision dual colors or wish to blend contrasting wood finishes inside and out, our profiles are engineered to make your design aspirations a reality.

SUMMARY

SIMPLICITY

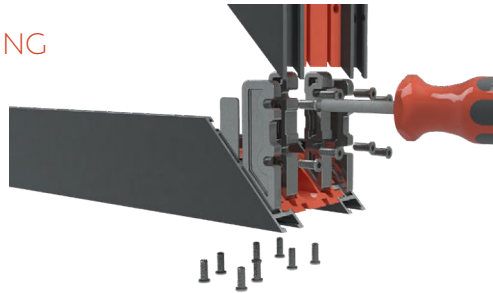

FLEXIBILITY & CHOICE

Rhinotrusion provides an impressive range of window & door around a single core.

EASE OF MANUFACTURING

1. Assemble profile.
2. Cut to length.
3. Drill and machine.
4. Connect the corners.

MATCHING PROFILES

All of our door and window profiles match across the range. The manufacturing process is the same.

EFFICIENT LOGISTICS

Stock holding of the profiles uses a smaller footprint. The finished products can also be delivered in knock down form.

THE SYSTEM

01

Flexible solutions for evolving needs

Fully Adjustable
Bifold / Slider Rollers
Lift-On Bifold Door Hinges

DESIGNED FOR INSTALLERS

Engineered to streamline installation, and long-term service—reducing labor time, minimizing call-backs, and improving overall profitability for your manufacturing and dealer network.

EASE OF MANUFACTURE

Rhinotrusion is designed to make your production line faster, simpler, and more profitable. Instead of juggling multiple systems from different suppliers, you gain a single engineered core platform that drives every major product type you build—bi-folds, sliding doors, casements, fixed units, and more.

Our Winsul8 high-performance thermal profile reduces fabrication steps, lowers material waste, and delivers consistent, repeatable quality. By integrating strength, insulation, and versatility into one core,

Rhinotrusion enables manufacturers to streamline operations, reduce tooling complexity, and increase throughput—all while offering a superior product to the market.

REDEFINING THE FUTURE OF DOOR & WINDOW MANUFACTURING

This isn't just a better fabrication system, it's a category-breaking platform.

A flexible, multi-material, multi-product manufacturing ecosystem engineered to adapt instantly to shifting design trends, emerging building codes, and the next wave of architectural innovation.

RHINOFOLD™ DOORS

RHINOFOLD delivers a scalable, high-margin product line with 100+ configurable bi-fold door systems, ranging from compact two-panel units to expansive ten-panel installations operating in multiple directions.

Our architecture allows full customization: inward or outward opening, left/right/both-side stacking, and seamless integration into diverse residential or commercial applications.

Every unit is built on a thermally insulated, high-performance core, engineered for energy efficiency, manufacturing simplicity, and rapid customization. This lets manufacturers produce premium, made-to-order systems without complexity—unlocking faster throughput, higher yields, and superior customer satisfaction.

RHINOSLIDE™ DOORS

RHINOSLIDE is a next-generation, multi-panel sliding door system engineered for the fastest-growing segment of the premium fenestration market. It combines advanced materials, modern design, and scalable manufacturing into a single high-margin product platform.

Available in 2–10 panel configurations, Rhinoslide gives manufacturers maximum design flexibility without increasing production complexity, unlocking faster throughput, lower cost per unit, and stronger competitive differentiation.

With superior aesthetics, thermal performance, and structural strength, Rhinoslide drives meaningful margin expansion and positions partners at the leading edge of a market shifting decisively toward high-performance, contemporary systems.

RHINOFRAME™ FLUSH CASEMENT WINDOWS

Flush casement windows represent one of the fastest growing segments in modern fenestration, driven by demand for clean architectural lines, high thermal efficiency, and low maintenance performance.

This product line strengthens competitive edge, expands a manufacturer's addressable market, and enables higher-margin system sales into both new construction and renovation channels.

RHINOFRAME™ PICTURE WINDOWS

RHINOFRAME picture windows expand our platform's market reach into high-margin architectural applications.

These high demand fixed glass units deliver modern design, maximum natural light, and top-tier thermal performance — all produced using the same core system as our bi-fold doors and sliders.

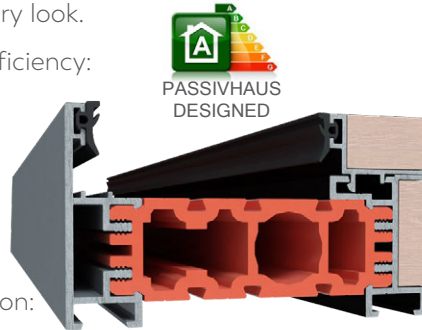

UPCOMING PRODUCTS AND DEVELOPMENT

RT9050: Advanced Performance

The RT9050 system introduces enhanced material options, superior thermal performance with an even larger 71mm insulated core, and a cohesive product range that includes bifold doors, sliding doors, casement windows, and more.

Key Features:

- Slim & Modern Profile: 90mm (3½") x 50mm (2") frame for a sleek, contemporary look.
- Exceptional Thermal Efficiency: Incorporates Winsul8 Technology with a 71mm insulated core for energy savings.
- Diverse Material Selection: Available in six premium material options.

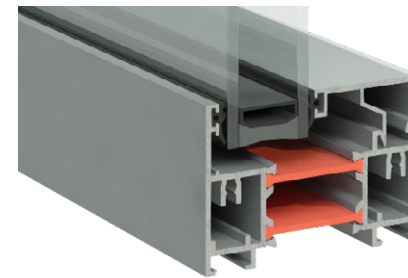

RT7650: Cost-Effective Performance

The RT7650 system delivers reliable functionality and solid thermal efficiency with a 34mm polyamide thermal break, offering a streamlined product lineup that includes bifold and sliding door panels and picture windows. This system is

Key Features:

- Clean & Compact Profile: 75mm (3") x 50mm (2") frame for a modern, understated appearance.
- Efficient Thermal Design

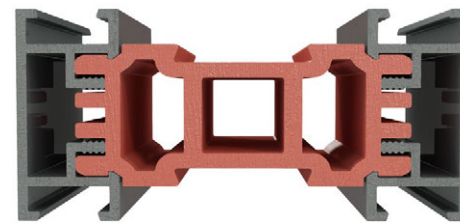

The RT7650 system combines affordability, dependable thermal performance, and a practical design, making it a smart choice for budget-conscious renovations or new builds.

GLASS FIBER REINFORCED COMPOSITE (GFRC) THERMAL BREAK UPGRADE

Upgrading to a GFRC thermal core transforms the break from a passive insulator into a structural reinforcement.

- Higher tensile and flexural strength from glass-fiber reinforcement for superior rigidity.
- Reduced deflection under wind load and panel weight, outperforming aluminum.
- Storm-ready stability, maintaining alignment and seals during extreme weather.
- Allows larger openings and slimmer sightlines without sacrificing structural integrity.
- Resists twisting, bowing, and long-term fatigue for durable, high-performance systems.

About the RhinoCrash Network

The **RhinoCrash Network** is a structured partnership framework created to foster collaboration, supply chain stability, and shared commercial success. Participation in the network provides the following advantages:

1. Commercial Benefits

- Preferential partner-level pricing across core product groups
- Priority access to production scheduling and material allocation
- Eligibility for volume-based commercial incentives

2. Engineering & Technical Support

- Assistance with tool development, profile integration, and production optimization
- Access to detailed fabrication manuals and process specifications
- Opportunities for joint system development and product enhancement
- Early access to new product releases and system improvements

3. Market Development & Sales Enablement

- Access to marketing materials customized with partner branding through our software portal.
- Sales and installation training support
- Inclusion in the RhinoCrash Network dealer directory. (*U.S. rollout 2026*)
- Collaboration on industry exhibitions, events, and promotional campaigns

4. Supply Chain Reliability

- Consistent, dependable access to strategic manufacturing resources
- Material stocking solutions tailored to partner requirements
- Scalable supply structures to support sustained growth

What is the RhinoCrash Network?

An exclusive alliance of manufacturers, fabricators, and installers united under the Rhinotrusion brand.

Like a crash of rhinos – a group that moves with unstoppable strength – the RCN embodies collaboration, resilience, and shared success in the aluminum systems market.

“Individually strong. Collectively unstoppable”

Alignment With Your Organization

Your company demonstrates the operational capability, manufacturing expertise, and commitment to quality that align with the standards and strategic objectives of the RhinoCrash Network.

As market demand continues to increase for high-performance fenestration systems, this partnership will position your organization to deliver superior products with greater efficiency, reliability, and cost advantage.

Partner Deliverables

Upon joining the RhinoCrash Network, your organization will receive:

Material & System Access

Complete material packages for:

- Bi-folding doors
- Entrance doors
- Multi-sliding doors
- Window systems

A tier related pricing schedule is included within this proposal

Technical Documentation & Support

- Profile drawings, CAD files, and fabrication documentation
- Software portal access to price a job, order materials & create cutting sheets
- Onboarding and production training support

Commercial & Marketing Collaboration

- Official partner designation and use of RhinoCrash Network branding
- Opportunities for market expansion initiatives

SUMMARY

Geographic Area Exclusivity Offer & Terms

1. Introduction

Rhinotrusion offers RhinoCrash Network partners the option to secure **Geographic Area Exclusivity**, providing protected rights to fabricate, market, and distribute approved systems within a defined territory. This structure supports growth, protects investment, reduces channel conflict, and strengthens market coverage.

2. Territory Scope

- Defined by county/region, MSA, major city, population zone, radius (e.g., 100 miles), or strategic commercial areas.
- Boundaries documented and mapped in the partner agreement.

3. Eligibility Requirements

- Adequate manufacturing capacity for regional demand.
- Sales/dealer network plan covering builders and installers.
- Compliance with Rhinotrusion fabrication and QC standards.
- Acceptance of annual purchase minimums.

4. Exclusivity Structure

- Protected Sales Territory:
 - Sole rights to purchase, fabricate, and supply assigned systems.
- Market Protection:
 - No competing partners appointed in the area.
 - Rhinotrusion will not supply competing manufacturers.
 - All relevant inquiries routed to the exclusive partner.
- Product Scope: Full portfolio or selected systems as defined.

5. Commercial Terms

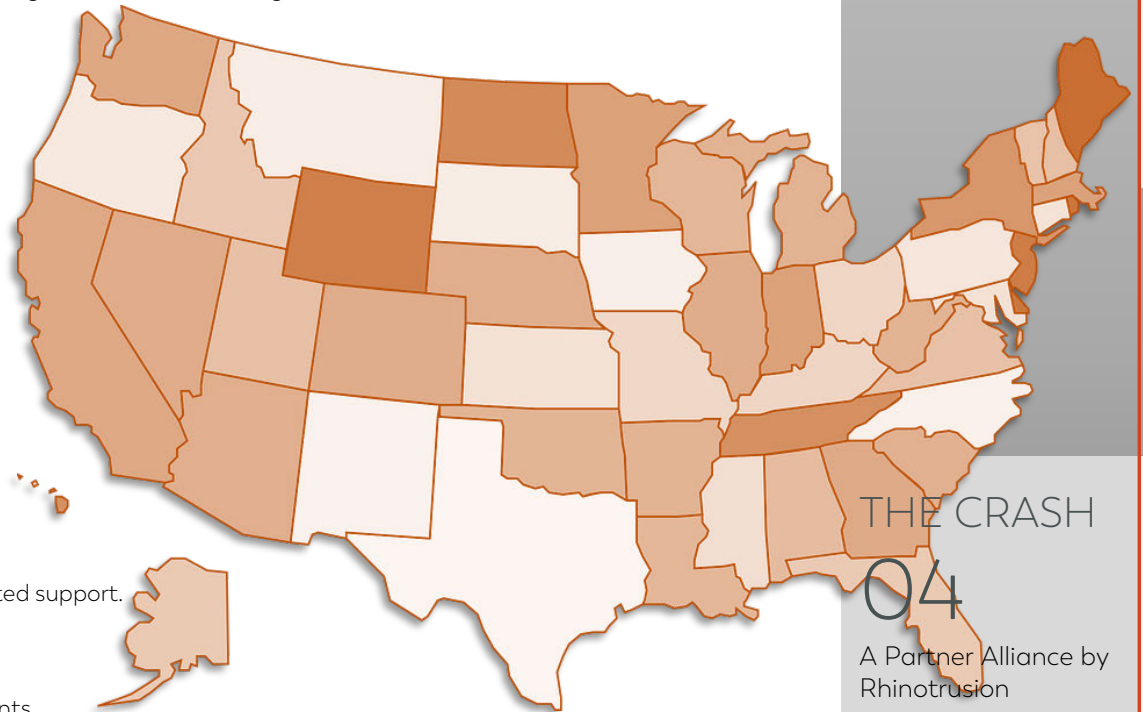

- Minimum annual volume commitments with ramp-up and targets.
- Support for dealer onboarding and training.
- Access to enhanced pricing, rebates, priority allocation, and dedicated support.

6. Term, Renewal & Termination

- Term: 1-3 years.
- Renewal based on meeting all performance and volume requirements.
- Exclusivity may be withdrawn for missed volume, quality issues, inactive territory development, or voluntary release.
- Partner may continue in the program without exclusive rights unless another manufacturer is appointed.

8. Conclusion

Geographic Area Exclusivity provides committed RhinoCrash Network partners with a significant market advantage by securing protected operating zones, stabilizing commercial investment, and ensuring access to high-quality Rhinotrusion systems without internal competition. In return, Rhinotrusion benefits from consistent volume, professional market representation, and reliable regional coverage.

Pricing Scales & Material Package Structure

Rhinotrusion delivers a scalable, volume-driven pricing model built to accelerate manufacturer profitability and reward growth.

Package Inclusions (All Tiers)

Five-tiered material packages—based on quarterly production output of 3-panel sliding or bi-folding doors, provide predictable costing, clear upgrade paths, and commercial incentives for expansion. Each package includes all components required for a fully compliant Rhinotrusion door system, enabling immediate fabrication without added engineering burden.

Tiered Pricing Structure (Quarterly Production)

Points are awarded as production volume increases, partners unlock enhanced pricing, priority logistics, and performance-based rebate opportunities—aligning cost efficiency directly with growth. Tiers can be assigned/negotiated based on reach and production scale.

Tier	Volume	Pricing Level	Tier Description
Bronze	50+ Sets	Standard Rate	Entry into the program with curated material access and baseline benefits
Silver	75+ Sets	Preferred Rate	Enhanced access, improved pricing position, and refined support options.
Gold	100+ Sets	Advantage Rate	High-performing partner level with superior pricing advantages.
Platinum	150+ Sets	Premium Rate	Elite manufacturing capability with priority allocation and premium incentives.
Diamond	200+ Sets	Elite Rate	The highest distinction: maximum incentives, strategic support, and top-tier pricing.

Material Delivery & Cost Consideration

Each tiered package is fulfilled through multiple specialized suppliers, meaning components arrive in staged shipments aligned with production and logistics schedules. Partners must maintain smart inventory planning to ensure uninterrupted manufacturing. *Wood sections are sourced by partner locally. Shipping and tariff costs are excluded from base pricing and applied at prevailing rates upon delivery.*

Example Tier, Benefits, Price and the Path Forward

Silver Tier — Growth-Stage Production Package

Your current tier is the Silver Tier, reflecting your growing production capacity and expanding footprint in your region. Your current offering includes full material packages at improved pricing, access to enhanced support, and the ability to scale your fabrication operations more efficiently.

However, you can change this status by increasing your quarterly output to reach Gold Tier performance, unlocking greater commercial incentives, priority access, and stronger cost efficiencies.

Presented below is your package offer as determined by your designated tier level.

Rhinotrusion: Redefining Fenestration

Delivering Advanced Composite Engineering To Transform How Modern Systems Are Built

1. THE OPPORTUNITY

“Join the Next Category-Breaking Manufacturing Platform”

- The fenestration market is shifting toward high-performance, thermally advanced systems.
- Manufacturers need differentiation, faster production, and profitable modern product lines.
- Rhinotrusion delivers a unified, multi-product system engineered for future market demands.
- Partnering now positions you ahead of the industry curve.

2. WHY THE RHINOCRASH NETWORK EXISTS

“Individually Strong. Collectively Unstoppable.”

- Manufacturers face fragmented supply chains and outdated systems.
- RCN creates a unified alliance—shared strength, shared technical support, shared success.
- Network partners gain protected access, stability, and competitive advantage.
- Built for long-term collaboration and market expansion.

3. THE SYSTEM ADVANTAGE

“One Engineered Core, Endless Product Capability”

- Single-platform architecture replaces dozens of legacy systems.
- Bi-folds, sliders, casements, picture windows—all built around the same engineered core.
- Reduces tooling, simplifies production, increases throughput.
- Consistent assembly principles across every product type

4. MANUFACTURING POWER & EFFICIENCY

“Faster Fabrication. Lower Waste. Higher Margin.”

- Winsul8 high-performance insulated core improves thermal and structural performance.
- Manufacturers significantly cut inventory footprint and streamline operations.
- Knock-down delivery options and lean logistics reduce cost and storage space.

5. MARKET-READY PRODUCT RANGE

“Sell More Products Without Adding Complexity”

- RHINOFOLD™ bi-folds — up to 10 panels, customizable in all configurations.
- RHINOSLIDE™ multi-sliders — high-demand contemporary systems with premium margins.
- RHINOFRAME™ casements & picture windows — expanding reach into architectural markets.

6. MATERIALS & DESIGN FLEXIBILITY

“Any Finish. Any Style. Any Market Segment.”

- Systems support aluminum, wood, contemporary wood, hybrid, and GlassIIEdge frameless aesthetics.
- Manufacturers offer dual-color, mixed-material, or custom look without retooling.
- Unlocks premium markets and diverse architectural applications.

7. GFRC THERMAL CORE UPGRADE

“Stronger. Stiffer. Storm-Ready.”

- Glass Fiber Reinforced Composite dramatically increases structural rigidity.
- Reduces panel deflection, improves wind-load resistance, and stabilizes large openings.
- Enables slimmer sightlines and larger spans without compromising performance.
- Ideal for premium, coastal, and extreme-weather markets.

8. COMMERCIAL BENEFITS FOR MEMBERS

“A Partnership That Boosts Profitability”

- Preferential partner-level pricing across product families.
- Priority allocation and supply chain stability.
- Access to technical training, CAD files, fabrication guides, and onboarding support.
- Co-branded marketing assets, events, and dealer directory placement

9. GEOGRAPHIC EXCLUSIVITY & GROWTH PATH

“Secure Your Territory. Own Your Market.”

- Optional exclusive manufacturing territory with protected rights.
- All inquiries in your region routed to you exclusively.
- Volume-based tier progression unlocks superior pricing and incentives.
- Maintain exclusivity through performance, sales commitment, and quality compliance.

10. THE PATH FORWARD

“Join the RhinoCrash Network and Scale Faster”

- Simple onboarding: materials, manuals, CAD files, and complete system access.
- Tiered pricing packages (Bronze → Diamond) based on quarterly output.
- Clear upgrade pathway—higher volume = lower costs + premium support.
- The network is growing—now is the time to lock in position and territory.

CONCLUSION

Joining the RHINOCRASH Network gives you a stronger product line, better margins, and a future-ready manufacturing advantage. Together, we can grow faster, compete harder, and lead the next generation of window and door systems.

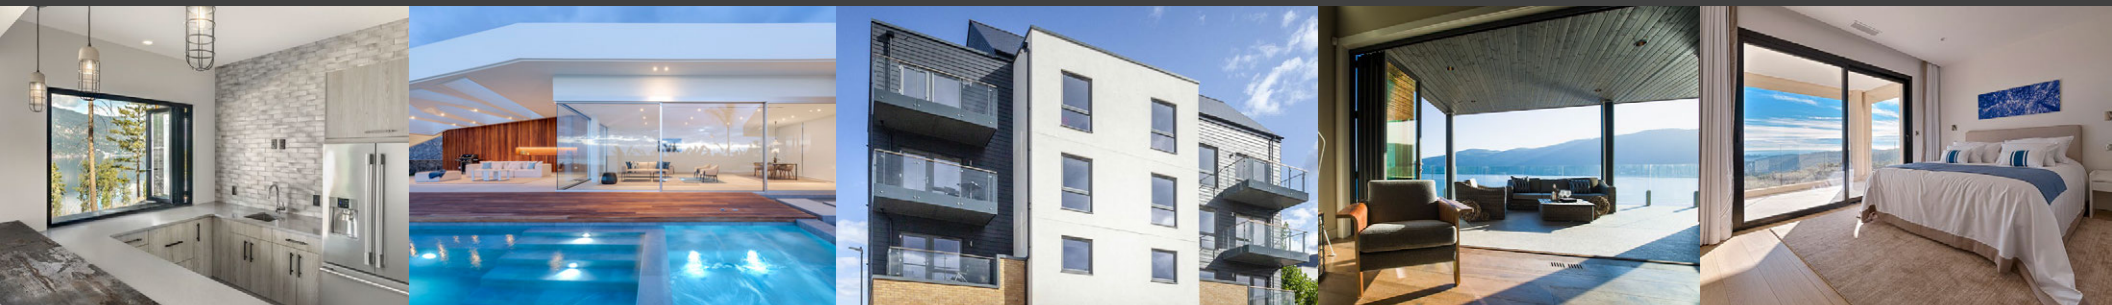

Setting New Heights: Expanding Your Offering, Elevating Your Business

In today's competitive window and door market, manufacturers win by standing out. The ability to offer more choice—more systems, more configurations, more finishes—directly translates into stronger customer relationships and higher-margin opportunities. Clients expect tailored solutions, and the manufacturers who can deliver them consistently are the ones who capture long-term loyalty and repeat business.

Joining our network gives you immediate access to a broader, more versatile product portfolio, backed by proven engineering, modern aesthetics, and a full range of performance-driven profiles. This partnership empowers you to respond to any customer requirement—from premium sliding doors to energy-efficient windows—without expanding your internal tooling or development costs.

By aligning with our standards for quality, innovation, and reliability, you position your business ahead of evolving market demands. You gain the flexibility to win more bids, serve more project types, and confidently present yourself as a manufacturer with true breadth and depth.

To manufacturers ready to differentiate, grow, and lead: partner with us. Together, we'll shape a stronger, more competitive future for your business and the wider industry.
